

Drupal - ADTU Project Issues & Resources

2025-05-14 Building Popular Links Nav

Problem

To build this nav, here is my approach. but I do not know how to implement it.

I have a custom block called Block Paragraph in my drupal website that has a field called Block Paragraph field that takes unlimited amount of the same paragraph type "Popular Link Collection", in the twig template of this custom block, I must extract a field from Popular Link Collection called Link Collection Title and render it in this custom block.

Solution

Problem

Issue: conditional rendering for in-text link description (i.e. when description is empty don't render the description block) doesn't work

The description block is always rendered regardless of it being empty or not

Driving Labour Action

Collective action is at the heart of what we do. Whether through **negotiations, advocacy campaigns, or coordinated actions**, ADTU stands up for members to improve contracts, benefits, and workplace policies.

Use this form for reimbursement related to **Pro-D** activities, including event fees, materials, and mileage.

Solution

instead of using

```
{% if content.field_link_description.value is not empty %}  
  <div class="link__intext_info flex__row">  
      
    {{ content.field_link_description }}  
  </div>  
{% endif %}
```

use this instead:

```
{% if paragraph.field_link_description.value is not empty %}  
  <div class="link__intext_info flex__row">  
      
    {{ content.field_link_description }}  
  </div>  
{% endif %}
```

(replace content with paragraph to access field's raw value
